

Project Design Phase-II
Solution Requirements (Functional & Non-functional)

Date	
Team ID	
Project Name	Optimizing User, Group, and Role Management with Access Control and Workflows
Maximum Marks	4 Marks

Functional Requirements

The proposed ServiceNow solution provides the following functional requirements:

FR-1: User Management

- Create new user accounts.
- Update user information.
- Delete inactive user accounts.
- Search and manage users.

FR-2: Group Management

- Create project groups.
- Add and remove users from groups.
- Manage group memberships.

FR-3: Role Management

- Create custom roles.
- Assign and remove roles from users.
- Manage role-based permissions.

FR-4: Access Control

- Configure Access Control Lists (ACLs).
- Restrict record and field access based on roles.
- Ensure only authorized users can modify project data.

FR-5: Workflow Automation

- Automatically assign tasks.
- Send approval requests.

- Generate email notifications for important updates.

FR-6: Project and Task Management

- Create project records.
 - Manage task records.
 - Track task status and project progress.
-

Non-Functional Requirements

NFR-1: Usability

The system should provide a simple and user-friendly interface that allows administrators and users to perform tasks efficiently.

NFR-2: Security

The application should ensure secure access through user authentication, role-based permissions, and Access Control Lists (ACLs).

NFR-3: Reliability

The system should maintain accurate data and perform consistently during normal operations.

NFR-4: Performance

The application should process user requests, record updates, and workflow executions with minimal delay.

NFR-5: Availability

The ServiceNow platform should be accessible whenever required, ensuring continuous availability for users.

NFR-6: Scalability

The system should support the addition of more users, groups, roles, projects, and tasks without affecting overall performance.
